Polyethylene plastic bollard covers are available in a range of colors for aesthetics and visibility. Polyethylene won't fade or chip from regular weathering, and is low-maintenance. Plastic bollard covers also resist physical markup from collisions, and chemical wear from solvents and de-icing salts.

ABOUT POLYETHYLENE

Each post cover is made from polyethylene plastic in which the selected color is impregnated. Ultraviolet and antistatic additives prevent fading due to sun exposure, producing a bright, resilient color. The color extends through the entire material area of the cover, so subsequent dents and scratches have a minimal effect on the overall appearance.
